Office Visits – Child Health Care Associates

Birth: **Hep B, Beyfortus (PRN),Vitamin K, Erythromycin, (given while in the hospital).** A provider at the hospital will come see you and the baby. Answer any questions you may have and then let you know you know when you should make your first appointment at our office.

3-6 Days (24-72hrs after hospital discharge): Office visit with pediatric provider. We will check your baby's weight, check for jaundice, and discuss feeding and other newborn issues.

2 weeks old: Office visit. We will make sure your baby is back up to their birth weight, re-examine your baby, and discuss any issues that may have arisen in the last week.

1month month old: Office visit. We will continue to monitor your baby's weight gain and answer and questions you may have

2 months old: **Vaxelis (DTaP, Hib, IPV, Hep B), Pneumococcal, Rotavirus** - Office visit with pediatric provider. We will assess growth and development

4 months old: **Vaxelis (DTaP. Hib, IPV, Hep B), Pneumococcal, Rotavirus** -Office visit with pediatric provider. We will assess growth and development
6 months old: **Vaxelis (DTaP, Hib, IPV. Hep B), Pneumococcal, Rotavirus, Influenza & Covid** (if in season)-Office visit with pediatric provider. We will assess growth and development

9months old: **Vision Check**. Office visit with pediatric provider. We will assess growth and development. We will also have you complete an MCHAT and ASQ screening. These are both screenings to assess your child's development.

12 Months old: **MMR, Varicella, Hep A, Pneumococcal, Hemoglobin & Lead Check, Vision Check.** Office visit with pediatric provider. We will assess growth and development

15 months old: **Pentacel (DTaP, Hib, IPV).** Office visit with pediatric provider. We will assess growth and development

18 months old: **Hep A**- Office visit with pediatric provider. We will examine your child and assess growth and development. We will also have you complete an MCHAT and ASQ. An MCHAT is an Autism screening tool and an ASQ looks at your child's development.

2 years old: **Hemoglobin/lead check, vision check**- Office visit with pediatric provider

30 months old: Office visit with pediatric provider. We will assess growth and development. We will also have you fill out another ASQ (Developmental Screening Questionnaire)

3 years old: **Hearing/vision check, Lead screening PRN**- Office visit with pediatric provider. We will assess growth and development. After 3-year appointment we will now start to see your child yearly. It is important to make sure that everything is developing normally. We need to plot their growth pattern to identify any problems with height or weight. We will help you assess their dietary habits, safety habits, learning issues. Seeing them yearly allows us to catch any abnormalities early before they become a major problem.

4-5 years old: **Proquad (MMR, Varicella), Quadracel (Dtap, IPV), Vision/Hearing Check, Lead screening PRN**- Office visit with pediatric provider. We will assess growth development, school readiness.

6-9 years old: **HPV (at age 9), Vision check**- Office visit with pediatric provider. We will assess growth development.

10 years old: **Tdap/HPV, Vision Check & Cholesterol Screen:** Office visit with pediatric provider. We will assess growth development.

11-12 years old: **Menquadfi (Meningococcal Group ACWY), HPV(If series not yet complete), Vision Check, Cardiac Screen (at age 12).** - Office visit with pediatric provider. We will assess growth development.

13-17 years old: **Menquadfi (Meningococcal Group ACWY) (at age 16) & Bexero (Meningococcal Group B)- (at age 16 and 17), Vision Check, Cardiac Screen, Cholesterol Screen (at age 17)**- Office visit with pediatric provider. It is very important that we continue to examine your adolescent yearly. There is a lot of growth and changes going on at this time. We need to be sure that everything is on track. We will be checking for scoliosis and a lot of other medical issues that can develop during puberty. Starting at 13 your child will be given an adolescent screen and first meet with the provider alone to discuss the many social and peer issues that they may encounter. Parents are then invited back for remainder of the appointment.

18 years old: Office visit with pediatric provider. We will assess growth and development. This is your child's final annual wellness visit with office. It is time to start looking for an adult provider. We will continue to see you throughout the year for sick visits as needed, but should be transferred to an adult provider by 19th birthday.
